The QuantumIntel Briefing

5 Disruptive Stocks Set to Reshape 2025

If you're tired of chasing headlines and ready to invest in where the world is actually going-this is for you.

Below are five asymmetric plays sitting just outside the spotlight.

1. Stem Inc. (STEM)

The AI backbone of global energy.

Stem uses machine learning to optimize large-scale energy storage systems-helping utilities manage cost, supply, and grid efficiency. It's a critical but quiet player as AI, electrification, and clean tech collide.

* AI + Energy = Massive tailwinds

2. Rigetti Computing (RGTI)

Quantum isn't coming-it's already here.

This sub-$2 stock is building real superconducting quantum systems, with contracts from DARPA and the U.S. Department of Defense. If quantum goes mainstream, Rigetti could be a sleeper winner.

* A pure-play quantum moonshot with receipts

3. Recursion Pharmaceuticals (RXRX)

Biotech meets machine learning.

Recursion is revolutionizing drug discovery by feeding petabytes of biological data into NVIDIA-powered AI systems. Their partnerships with Roche, Bayer, and Genentech tell you this isn't just hype.

* Industrializing biology with code

4. Redwire Corporation (RDW)

The QuantumIntel Briefing

5 Disruptive Stocks Set to Reshape 2025

Space infrastructure is quietly booming.

Redwire is building in-orbit manufacturing systems, solar arrays for satellites, and spaceflight-ready 3D printers. The space economy is worth $546B-and Redwire is behind the scenes.

* NASA-tested, recession-resistant space stock

5. NuScale Power (SMR)

Rewriting the nuclear energy playbook.

NuScale builds small modular reactors (SMRs) that are scalable, efficient, and safer than traditional plants. Backed by government funding and international deals, they're quietly making nuclear investable again.

* Decentralized energy meets global necessity
